

CMSI 4072 — Project Status Sheet

Spring 2026

Accomplishments

- Completed all core shelf functionality including Want to Read, Currently Reading, and Finished pages, with full ShelfController support enabling users to seamlessly add and move books between shelves.
- Built and deployed the review and rating system, allowing users to submit star ratings (1-5) and text reviews on book detail pages, with automatic average rating calculations displayed in real-time.
- Implemented core social features including user following/unfollowing functionality and public profile pages displaying user shelves and reviews.
- Developed the activity feed showing recent reviews and shelf updates from followed users, with pagination and real-time updates.

Scheduled Tasks

- Add search and filtering capabilities to the book catalog, allowing users to find books by title, author, genre, or ISBN.
- Implement email notifications for new followers/ following list and reviews to increase user engagement.

Noteworthy Risks

- Performance testing has not been conducted on the activity feed with large datasets potential optimization may be needed for users following 100+ people.
- Email verifications require third-party service integration which usually costs monet
